**Tuesday, October 25, 2011**  
**12:00 noon**  
**Seminar Room**

India is growing quickly and has become a competitive economy in last two decades by implementing several existing global innovations. As India transits from a service economy to innovative economy, for her to compete globally, she would need to invent newer, faster, cheaper, and safer products and services and vigorously protect IPRs and commercialize them. This would require an appreciation of technology, law, and business strategies. An overview of these strategies will be presented and discussed.
